

In our efforts to launch the Bluetooth receiver (AR-BT-2), we inadvertently left out the app instructions from the manual. Our apologies for any inconvenience this may have caused! Connecting to your smart device is easy, here are the steps:

Search "solar app" in your app store and you should see an orange app titled "solar app" with either "lifestyle" or "srne" underneath. This is the app you want. Once downloaded, connect the Bluetooth receiver to the controller and go into "device info" on the bottom right of the app. Select "search device" and the controller info should appear. You can now access all of the controllers information on your smart device!
